

Project-004 : Sass Website Page Design

Description

Project aims to create website site using sass.

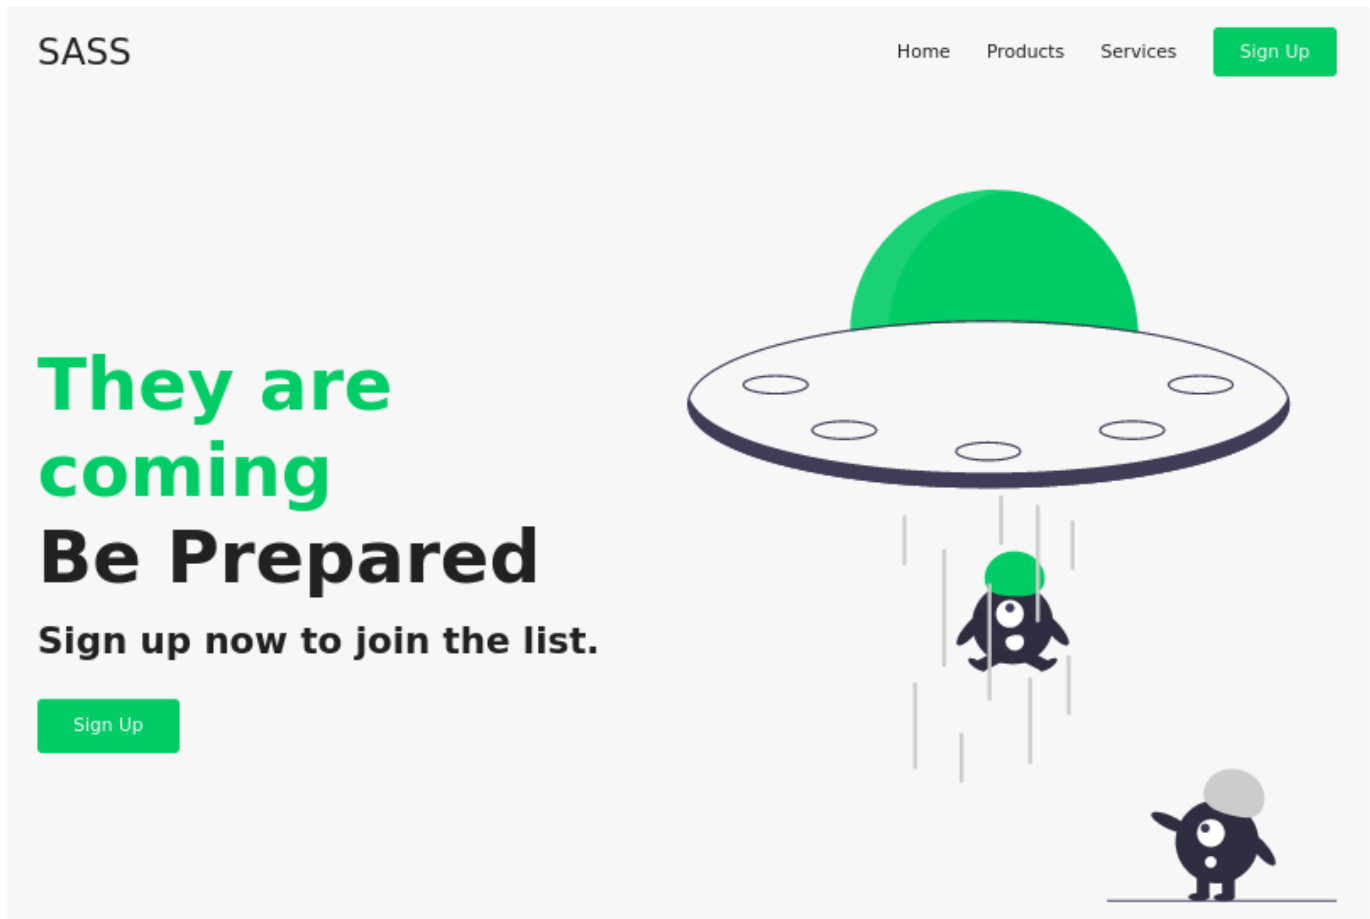

Problem Statement

- Your company has recently started on a project that aims to create a company website page. So you and your colleagues have started to work on the project.

Project Skeleton

```
004-Sass-website-page-design (folder)
|
|----readme.md          # Given to the students (Definition of the project)
|----images             # Given to the students (Images of the project)
|----solution
    |----index.html
    |----styles (folder)
        |----_color.scss
        |----_media-queries.scss
        |----_navbar.scss
        |----style.css
        |----style.css.map
        |----style.scss
    |----img (folder)
```

Expected Outcome

Objective

Make a web page like in the [example project](#).

At the end of the project, following topics are to be covered;

- HTML
- CSS
- Sass / Scss

At the end of the project, students will be able to;

- improve coding skills within HTML, CSS & Sass/Scss
- use git commands (push, pull, commit, add etc.) and Github as Version Control System.

Steps to Solution

- Step 1: Download or clone project repo on Github
- Step 2: Create project folder for local public repo on your pc
- Step 3: Create Sass Website.

- Creat structure of the HTML5
- Give name of your project (title)
- Create the main structur of the HTML

Part-2 Sass / Scss Structure

- Set a background
- Set color and margin etc..
- Define others color-size-padding etc with scss

- Step 3: Push your application into your own public repo on Github
- Step 4: Deploy your application on Github template to showcase your app within your team.

Notes

- You can use HTML and CSS to complete this project.
